QUICK GUIDE

UCT Exit Pathways

EdOS × Careers Service — one student journey, two connected platforms

How to open the prototype, sign in as each person, what to try, and how to send us your feedback.

Open it: <https://niallnaidoo.github.io/uct-exit-pathways/>

No UCT graduate should leave without a plan.

Students plan their exit pathway in EdOS. The Careers Service, employers and alumni mentors work alongside them — and the two platforms talk to each other.

Prototype · demo data only · October 2026

1 · What it is

A prototype built for UCT's university-wide mentorship and careers programme. It helps every penultimate- and final-year student plan what comes after UCT — and makes sure no one leaves without a plan.

The four exit pathways

Further study	Employment	Start-up & self-discovery	Unemployment
UCT Honours, Masters, PGDip, programmes elsewhere, bursaries and scholarships	Graduate programmes, jobs, internships, work-readiness placements	Start-up support, volunteering, gap and exploration programmes	The outcome we prevent — the platform spots who is at risk and reaches them early

Students can choose more than one — for example a job **and** Honours.

Two platforms, connected

Platform	Who uses it	What it does
EdOS	Students and graduates	Their learning platform. Plan exit pathways, see opportunities checked against their own marks, apply, book support, work with an alumni mentor, track marks, tests and their transcript.
Careers Service	Careers staff, employers, alumni mentors	See every student's plan and engagement, spot unemployment risk and reach out, publish and send opportunities, manage applicants, run the alumni mentorship programme, track graduate destinations.

The two platforms share **no database**. Everything that crosses between them — a pathway chosen, an opportunity sent, an interview invite — is a defined message. Careers sees a student's average and credits, never individual module marks.

2 · Getting started

Open it

1. Open this link in any browser (Chrome, Edge, Safari) — a laptop is best:

<https://niallnaidoo.github.io/uct-exit-pathways/>

2. Nothing to install and no account needed. Everything runs in your browser — nothing you type is sent anywhere.

Sign in

The sign-in page sends each person to their own product. **Click a person** under “Or sign in as”, or type an email below. The password for everyone is **demo**.

Person	Role	Email	Lands in
Nomvula Cele	Student — no plan yet	celnom010@myuct.ac.za	EdOS
Kagiso Molefe	Student — has a mentor and an offer	mlfkag001@myuct.ac.za	EdOS
Yusuf Adams	Student — at risk	admyus016@myuct.ac.za	EdOS
Zinhle Ndaba	Student — mentor offer waiting	ndbzin004@myuct.ac.za	EdOS
Fatima Jappie	Graduate, class of 2025	jppfat104@myuct.ac.za	EdOS
Thembi Nkosi	Careers advisor	careers@uct.ac.za	Careers console
Ubuntu Bank (sample)	Employer	recruit@ubuntubank.example	Employer portal
Naledi Khumalo	Alumni mentor	naledi.khumalo@example.com	Mentor dashboard

Handy links on the sign-in page

Side-by-side view — EdOS and the Careers Service on one screen (pick who is signed into each). Best for showing people how the two connect.

Reset demo data — puts everything back to the starting point.

Give feedback — opens the feedback form (see section 5).

Sign out — every product has one; it returns you to the sign-in page.

3 · Using it — by person

Students (EdOS)

1. **Home** — average, credits, next test, your exit pathways, your mentor, support the Careers Service set up, and opportunities sent to you.
2. **Exit pathways** — choose one or more, tick how ready you are, pick fields you're curious about, **Save my plan**.
3. **Opportunities** — each card says plainly if you can apply ("You meet the 65% average" or what's missing). **Sent to you** shows what Careers picked for you. **Apply through EdOS** asks for CV, cover letter and LinkedIn; EdOS attaches your transcript. Follow each stage under **My applications**.
4. **Marks & tests** — upcoming tests, this year's gradebook, and **Upload your UCT transcript** to see your average by year and results by class.
5. **Alumni mentor** — ask for a mentor (tap the times you're free), accept an offer, then message and book meetings.
6. **Graduates** — tell UCT where you are now (employed, further study, start-up, or still looking).

Careers Service staff

1. **Overview** — the graduating cohort's pathway mix and where last year's graduates landed.
2. **Students** — everyone, with their pathways, readiness, applications and risk. Click a student for their full journey.
3. **Engagement** — live from EdOS: last time they checked opportunities, days since mentor contact, days till their next test, gradebook, interventions.
4. **Opportunities** — post one, open any to see applicants and move them through stages, and **Send to students** to hand-pick who gets it.
5. **Unemployment risk** — who is most at risk and why. **Reach out** sends support straight into the student's EdOS.
6. **Mentorship** — approve mentor applications, see matches, and pick up check-ins and concerns. **Destinations** — follow up graduates.

Employers

1. **Post an opportunity** in four steps: what it is (job, graduate programme, internship, bursary, scholarship...) > who it's for (faculty, degree such as BCom, year of study, minimum average — with a live count of matching students) > what applicants submit (CV, cover letter, transcript, LinkedIn) > review and publish.
2. Open an opportunity to see applicants and their documents, and move each one along (shortlisted, interview, offer, hired). The student sees every change in EdOS.

Alumni mentors

1. New mentors sign up at **/careers/#/join** — six steps, ending with a preview of how students will see your profile. The office approves you.
2. Your dashboard shows **Potential matches** (students who fit your profile), **My mentees** (only students who agreed), meetings, messages, guides and a quick check-in. You never see other mentors.
3. Each mentee card shows when you're both free and — if the student agreed — their subjects, marks and upcoming tests.

4 · Five-minute demo

A good order to see how it all connects. Start with **Reset demo data** on the sign-in page.

Step	Sign in as	Do this	What people see
1	Ubuntu Bank (employer)	Post an opportunity > Bursary > BCom · 3rd year · 60%+ > require CV, cover letter, transcript > Publish	The live count of matching students
2	Thembi Nkosi (Careers)	Opportunities > open the bursary > Send to students	Only eligible students listed; best fits pre-ticked
3	Kagiso (student)	Home > "Sent to you" > Apply	No forms — EdOS attaches the transcript
4	Ubuntu Bank	Open the bursary > move Kagiso to Interview	Kagiso's EdOS updates + inbox note
5	Thembi Nkosi	Engagement, then Unemployment risk > Reach out to Yusuf	Who needs help, and why
6	Yusuf (student)	Home > Book it	Careers sees "booked"
7	Kagiso	Marks & tests > upload any PDF > save	Transcript charts
8	Naledi (mentor)	My mentees	"You're both free" + marks & tests

Tip: open the **Side-by-side view** from the sign-in page so the audience sees EdOS and the Careers Service react to each other on one screen.

5 · Giving feedback

This is a prototype for UCT to react to — the more specific the feedback, the better. Screenshots help enormously.

Two ways to send it

Option	How
Feedback form	On the sign-in page, click Give feedback (or go to github.com/niallnaidoo/uct-exit-pathways > Issues > New > Feedback). It asks which part you looked at, what works, what should change, and how important it is for the pilot. Needs a free GitHub account.
Email	Reply to Niall's email with your notes and screenshots — no account needed.

Helpful things to tell us

1. **Who you were signed in as** (student, Careers staff, employer, mentor) and **which page**.
2. **What you expected** to happen, and what actually happened.
3. Anything **confusing, missing, or not how UCT works** — wording, steps, fields, policies.
4. Whether it's a **must-have for the pilot** (Jan–Mar 2027), nice to have, or later.

Good to know

- Your changes are saved only in **your own browser** — other people won't see them. **Reset demo data** on the sign-in page starts over.
- People, employers and opportunities in the demo are **fictional samples**.
- Reading an **official UCT transcript PDF** is simulated until UCT supplies its transcript template; the **CSV template** works for real.
- Emails, UCT single sign-on and Office 365 are **not connected yet** — they're part of the pilot build.
